BUSINESS SOLUTION

Deckle Planner

Calculates deckle positions for paper cutting machines, reducing paper wastage and completing orders priority-wise.

OVERVIEW

Deckle Planner is the software of tedious calculation for adjusting deckle size in paper cutting machines in the paper industries. This software not only calculates the deckle position, but also takes care of paper wastage. It gives the most optimum calculations for all sizes of deckles and drastically reduces the wastage of paper and at the same time gives maximum output and arranging the completion of different orders priority wise.

ADVANTAGES OF DECKLE PLANNER (12)

- Computerized deckle matching leads to faster planning
- Remove human errors and limitations
- Less trim wastage saves production cost
- Easy decision making with various available combinations
- Lesser steps saves time and energy with high production
- Synchronization and data flow between various departments
- Less human power and time require to achieve the goal
- Planning possible at last stage or for special / urgent orders
- Increase in Customers satisfaction
- Production schedule can be maintained more easily
- Remarkable increase in company production capacity
- Calculations in special scenarios are possible

KEY FEATURES OF DECKLE PLANNER (14)

- Scientific methods of permutations and combinations
- Best results with the help of artificial intelligence
- Multiple combinations for same set of selected order items
- Auto grouping of items based on BF and GSM
- Quality / Type bifurcations between items
- Additional grouping for special calculations
- Adjustable deckle size and number of cuts
- Adjustment of BF, GSM and Type
- Multiple results based on selected parameters
- Color code assignment for each item
- Graphical presentation of results and data
- Detailed description of each combination
- Various report generation based on entered data
- MIS (Management Information System) Reporting

Industry / application: Paper Industry
