Dear Sir / Madam,

Introducing MicroDot Softwares

MicroDot Softwares has been developing business software since 2005. Over more than 21 years we have delivered standard and customized software to more than 300 organisations and developed over 100 products for manufacturing, trading, service, healthcare, education and membership organisations.

Our work begins with understanding how your business actually operates: the process, the documents and the reports your team relies on. We then provide software that fits, either one of our standard products customised to your requirements or a solution developed specifically for you on our reusable framework.

Our current range includes 61 software products in six categories: Business, Accounts, Inventory, Service, Society and Medical. Alongside these we offer 82 web applications with live demos at microdot.in, hybrid mobile applications for Android and iOS, website development, and tools & utilities such as cheque and label printing. Where needed, our software connects with Tally, GST, E-Invoice, E-Way Bill, SMS and WhatsApp, payment gateways and biometric devices.

We have handled implementations at scale, including an enterprise ERP with 500 users at Pan Gulf Technologies, a highly customized manufacturing ERP for Bhalaria Metal Craft Pvt. Ltd., and a membership management ERP connecting the Mumbai head office of the National Union of Seafarers of India with 24 branch offices. Our clients and projects span India and countries including the USA, UK, China, the Netherlands, Ireland, Bahrain and South Africa.

Support is part of every engagement: training during implementation, then support by phone, email, chat, online and onsite, with a 24-hour resolution commitment.

Our Company Profile and Product List are enclosed for your reference. We would welcome the opportunity to understand your requirements; a short conversation or a demonstration is the best place to start.

Warm regards,

For MicroDot Softwares
